## PROFILE

I am a **B.E. Computer Engineering** student, with a strong focus on analysis, problem-solving, and building practical technology solutions. I have experience working on various projects like Expense Manager, AI Log Analyzer, and more, which combine frontend/backend development, data, and real-time systems. My approach is to deeply understand core engineering concepts and programming languages by directly implementing them into practical projects for clear verification. I am especially interested in using AI and data-driven systems to solve real-world problems.

## EDUCATION

|                                                                                                            |                               |
|------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Padmabhooshan Vasantdada Patil Institute Of Technology (PVPIT)</b><br><i>B.E – Computer Engineering</i> | Pune, India<br>2024 – Present |
| <b>Bharat College</b><br><i>12th (HSC)</i>                                                                 | Pune, India<br>2023           |
| <b>New Millenium English Medium School</b><br><i>10th (SSC)</i>                                            | Pune, India<br>2021           |

## EXPERIENCE

|                                                            |                    |
|------------------------------------------------------------|--------------------|
| <b>FullStack Java Developer Intern</b><br><i>IT Shaala</i> | Jan 2026 –Mar 2026 |
|------------------------------------------------------------|--------------------|

- Assisted in developing and maintaining website pages using Java Full Stack technologies.
- Worked on front-end design and styling to improve the website's appearance and user experience.
- Contributed to basic back-end development tasks and collaborated with the team to implement website features..

## PROJECTS

### **Expense Manager** | *React, JavaScript, HTML, CSS*

- Designed a real-time attendance system using dynamic QR codes with token rotation to prevent proxy attendance.
- Implemented secure authentication (JWT) and role-based access control (Admin, Student, Super Admin).
- Built live dashboards with WebSocket updates, reducing validation time to <150ms.
- Deployed scalable architecture using Docker supporting 100+ concurrent users.

### **AI Log Analyzer & RCA System** | *Java, Spring Boot, Spring AI, Kafka, Elasticsearch, PostgreSQL, Docker*

- Engineered a real-time observability platform to automatically ingest, normalize, and analyze microservice logs.
- Integrated Spring AI and LLMs for automated Root Cause Analysis (RCA) and actionable remediation guidance.
- Architected a resilient, high-throughput data pipeline using Apache Kafka, Elasticsearch, and Docker.

## TECHNICAL SKILLS

**Languages:** Java, JavaScript, HTML, CSS, SQL

**Frameworks:** React, Bootstrap, Spring Boot

**Tools:** Git, Docker

**Concepts:** OOPs, DSA, DBMS

## CERTIFICATIONS & ACTIVITIES

- Certifications:** NPTEL(DBMS), Edunet(Training).
